Divya Teja Gunnam

Cloud Engineer | AWS Certified Solutions Architect | Master of AI

Melbourne, VIC • +61 481 576 074 • gunnamdivyateja@gmail.com • linkedin.com/in/teja-gunnam-2a92a415a

SUMMARY

Cloud engineer with two years at Amazon Web Services helping enterprise customers fix production problems and get more from their cloud setup. Now finishing a Master of AI at RMIT and building AI applications of my own. I enjoy working out what a customer actually needs, then helping design something secure, reliable and sensibly priced to get them there.

EXPERIENCE

Cloud Support Engineer, Amazon Web Services 2022 - 2024

- Worked with enterprise customers to diagnose and fix production issues across EC2, ECS, Lambda, Redshift and VPC, within agreed response times.
- Handled high-severity escalations alongside Technical Account Managers and service teams, keeping customer stakeholders updated in plain language until systems were back up.
- Reviewed customer environments for cost and performance, and recommended changes that cut compute spend without hurting performance.
- Built data pipelines with Solutions Architects across AWS and Azure, moving customer data into Redshift for reporting and dashboards.
- Fixed a broken customer pipeline outside my own service area by tracing it to a cross-account VPC networking issue, and resolved it end to end instead of passing it across three teams.
- Wrote knowledge-base articles and ran internal training that shortened diagnosis time for the wider team.

Machine Learning Engineer Intern, Focus Bear Sep 2026 - Present

- Machine learning work on a live productivity app, working remotely with a distributed team across timezones.

Pipeline Assistant Technical Director, DNEG 2021 - 2022

- Built Python automation for visual effects pipelines on Dune and Tenet (credited on Dune), working directly with the artists who used it.

Part-time roles, Shiperoo, Spotlight and Foodbiz 2025 - Present

- Warehouse and administration work alongside full-time study. At Foodbiz I automated the weekly payroll calculation, removing a recurring source of errors.

SELECTED PROJECTS

Automated Curriculum Processing Engine, RMIT capstone with industry partner In progress

- Cloud and deployment lead for a five-person team building an LLM-based curriculum processing tool for an education client. I own hosting, deployment and workflow automation across AWS, Supabase, Vercel and n8n.

Cloud-Native Music Subscription App, RMIT course project

- Deployed the same backend three ways (Lambda with API Gateway, Flask on EC2, Docker on ECS Fargate), compared cost, scaling and effort, and recommended serverless. Designed the DynamoDB schema and kept artwork in a private S3 bucket behind pre-signed URLs.

Halo Voice, AI phone receptionist, live

- AI receptionist for small businesses running on Cloudflare Workers and the OpenAI Realtime API. Built so the API key never reaches the browser, using short-lived session tokens, rate limits and call time limits.

UAV Gesture Classifier, RMIT Deep Learning

- PyTorch classifier for drone hand signals. Caught a data leakage problem in the evaluation that was inflating the results, and fixed the testing method.

EDUCATION AND CERTIFICATION

Master of Artificial Intelligence, RMIT University, Melbourne Expected Dec 2026

Bachelor of Technology, Electronics and Communication Engineering, Bennett University 2021

AWS Certified Solutions Architect - Associate, Amazon Web Services

SKILLS

Cloud: AWS (EC2, ECS, Fargate, Lambda, API Gateway, S3, DynamoDB, VPC, IAM, Redshift), Microsoft Azure, Cloudflare Workers, Docker, Terraform

AI: LLM applications (OpenAI, Anthropic and Gemini APIs), LangGraph, n8n, PyTorch, machine learning

Data and development: Python, SQL, REST APIs, Flask, PostgreSQL, dashboards (QuickSight, Grafana), Git, Linux

Security: IAM and least-privilege access, private storage with pre-signed URLs, short-lived credentials, network troubleshooting

Working with customers: Stakeholder communication, escalation management, technical documentation, training
